Betaware Melamine Dinnerware is the superior range of high-quality kitchen and tableware designed exclusively for Australian conditions.

Smooth, light-weight and with a high gloss finish, Betaware Melamine has all the qualities of fine bone china yet is remarkably durable, standing up to the roughest treatment.

Suitable for any application, stylish Betaware Melamine is the ideal compliment to any commercial kitchen including *hotels, college campuses, retirement villages, nursing homes, child care centres, and hospitals etc.* Durable Betaware Melamine is also an economical choice for *holiday homes, boating, caravanning, camping, canteens, etc.*

Statistics show that 70% of conventional commercial dinner and kitchen ware is broken prior to the end of its expected life. Manufactured from a specially formulated composite of materials, Betaware Melamine is extremely durable and chip resistant and breakages are rare. Betaware Melamine is proven to outlast all alternatives, meaning huge cost savings on kitchen budgets.

Betaware meets the specific ergonomic requirements for capacity, stackability and storage. The thermal properties of the unique melamine compound enable better heat retention in food, meaning safer handling.

The non-porous surface of Betaware Melamine ensures that food particles cannot be trapped, eliminating discolouration and odours. Its high sound absorption means that kitchen noise is dramatically reduced, making for a better work environment. Further, Betaware Melamine is safe to use in industrial dishwashers. Melamine is not suitable for microwave oven use.
